

Figure 1

Figure 1 consists of two panels, A and B, showing the results of a principal component analysis (PCA) of 10 variables related to the study of the effect of the type of intervention on the level of knowledge about HIV/AIDS.

Panel A: This panel shows the first three principal components (PC1, PC2, and PC3) plotted against each other. The x-axis is labeled "PC1" and ranges from -1.0 to 1.0. The y-axis is labeled "PC2" and ranges from -1.0 to 1.0. The third principal component (PC3) is shown as a vector originating from the origin (0,0) and pointing towards the upper right quadrant. The length of the vector is approximately 1.0. The label "PC3" is placed at the end of the vector.

Panel B: This panel shows the same three principal components (PC1, PC2, and PC3) plotted against each other. The axes are labeled "PC1" and "PC2". The vectors for PC1, PC2, and PC3 are shown. PC1 points towards the upper left quadrant, PC2 points towards the lower left quadrant, and PC3 points towards the upper right quadrant. The labels "PC1", "PC2", and "PC3" are placed near their respective vectors.
